

Hard Rock Casino Project Ottawa, ON

UniGrip™ Y-Fit

GCS Clamp

This Casino project spanned over 80,000 sqft and six floors. Modern Niagara was looking to challenge their traditional methods for MEP suspension and decided to give Grippple's solutions a try. Grippple supplied **UniGrip™** kits and **GCS clamps** to the contractor effectively offering a complete suspension system for their Electrical, Mechanical, and Plumbing teams.

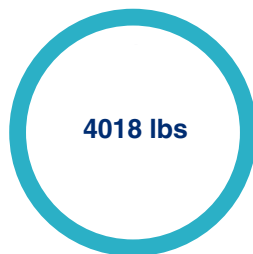

Collaboratively, Grippple assisted Modern Niagara in achieving 50% reductions in labour and ensuring maximised safety during the installation process. Grippple is now Modern Niagara's choice solution for MEP suspension.

Use Grippple. Its the way to go honestly, it looks good, its easy, its effective. As I've said we've done tests on it and it always comes out on top.

Scott LaFontaine, Sheet Metal Foreman, Modern Niagara

Labour Savings

Weight Reduction vs
Traditional Methods

Embodied
Carbon Savings
7,313 lbs of CO2
